Category Name Design

Actionee HAIS

Sub Category

Subject Graphs of multiple time periods

Description of Problem or Suggestion:

The current design apparently includes a capability to combine data from several different time periods on the same graph. How are the times of the data from different periods biased or normalized for display on a common time axis?

Originator's Recommendation

Provide a sample display to illustrate how such graphs appear, including indication of how the user knows what time period each curve or set of data on the graph represents.

HAIS Response Date 1/20/95

The current design does include a capability to combine data from several different time periods on the same graph. We will provide a visual indication of the normalized time periods (as well as the normalized X axis). Sample displays will be delivered at CDR in DID 605, Operations Scenario document.
